

Test data

Testing [v2 API](#)

You can use following as sessionKey value to simulate various risk level

```
"test-low-risk"  
"test-medium-low-risk"  
"test-medium-risk"  
"test-high-risk"  
"test-very-high-risk"
```

Testing [v1/customers API](#)

As part of your integration, you'll need to test the different risk levels we return, and how these trigger your decisioning logic. You can use the following test data to trigger specific responses:

Session Risk Level

CUSTOMER.EMAIL RISK LEVEL

low-risk@test.com	low
medium-risk@test.com	medium
high-risk@test.com	high
very-high-risk@test.com	very_high

Email Risk Level

Please use `rapidrisk3@fraudster.com` to emulate a high-risk email.

Phone Risk Level

To test varying phone risk level, please use the following phone values:

CUSTOMER.PHONE	RISK LEVEL
+12003004000	low
+12003004001	high

SSN Match (eKYC)

To test varying SSN match responses, please use the following tax ID (SSN) value

CUSTOMER.TAXID	RESPONSE
000000001	All match
000000002	Partial match
000000003	No match

Sanction, PEP & Adverse Media Match

For testing sanctions, PEP and adverse media hits, please use the following names:

NAME	HIT
Osama, Bin Laden	sanction
Edward, Snowden	adverse media
Barack Hussein, Obama	PEP

Testing v1/identity-verifications API

For simulating various cases, please use following value as sessionkey,

“sardine-test-low”

“sardine-test-medium”

“sardine-test-high”
